UNIX V1 manual 3 nov 1971

OSSANNA

UNIX PROGRAMMER'S MANUAL

K. Thompson
D. M. Ritchie

November 3, 1971

INTRODUCTION

This manual gives complete descriptions of all the available features of UNIX. It provides neither a general view (see "The UNIX Time-sharing System" for that) nor the implementation of the system (which remain to be

within the area it surveys, this manual attempts to be complete and timely as possible. A conscious decision to describe each program in exactly the state it was in when its manual was prepared. In particular, the manual describes something as it should be, not as it is, was. Inevitably, this means that many sections will soon be out of date. (The rate of change of the system is so great that a dismayingly large number of early sections had to be rewritten while the rest were being written. The unbounded effort to stay up-to-date is best indicated by the fact that the programs described were written specifically for the preparation of this manual!)

This manual is divided into seven sections:

- I. Commands
- II. System calls
- III. Subroutines
- IV. Special files
- V. File formats
- VI. User-maintained programs
- VII. Miscellaneous

Commands are programs intended to be invoked directly by the user, in contradistinction to subroutines, which are called by the user's programs. Commands generally reside in the directory `/bin` (for binary programs). This directory is automatically searched by the command line interpreter. Some commands are located elsewhere; this fact is noted in the appropriate sections.

System calls are entries into the UNIX supervisor. In assembly language, they are coded with the use of the opcode `trap` instruction.

The special files section discusses the characteristic system "file" which actually refers to an I/O device.

The file formats section documents the structure of various kinds of files; for example, the form of the output of the assembler is given. Excluded are files used by the user, for example the assembler's intermediate files.

User-maintained programs are not considered part of the system, and the principal reason for listing them is to document their existence without necessarily giving a complete

- ii -

description. The author should be consulted for information.

The miscellaneous section gathers odds and ends.

Each section consists of one or more independent entries of a page or so each. The entry is in the upper right corner of its page.

Entries within a page

will be better to

All entries

ken	K. Thompson
dmr	D. M. Ritchie
jfo	J. F. Ossanna
rhm	R. Morris

These three-character names also happen to be UNIX user ID's, so messages may be transmitted by the `mail` command, if the addressee is logged in, by `write`.

The organization of this document is a table of contents

A final convention is that the names of sections are listed in alphabetical order within each section.

An argument beginning with a lowercase letter is intended to mean some sort of file name. It is a position where a file name is used, and it is unwise to have files whose names begin with a lowercase letter.

The `description` section discusses in detail the operation of the system.

The `files` section gives the names of files which are used by the system.

A `see also` section gives pointers to related sections.

A `diagnostics` section discusses the diagnostic messages produced. This section tends to be as terse as possible.

The `bugs` section gives known bugs and sometimes suggested fixes. Occasionally also the suggested fix is given.

The `owner` section gives the name of the person to be consulted in case of difficulty. The rule is that the last one to modify something owns it, so not necessarily the author. The owner's initials

System is on magtape, perform the following steps to obtain a disk pack.

1. Mount magtape on drive 0 at load point.
2. Mount formatted disk pack on drive 0.
3. Key in and execute at 100000

```
012700      mov (pc)+, rd
172526      current address magtape
010040      mov rβ, -(rβ) → byte counter magt
012740      mov (pc)+, -(rβ) → command magt.
060003      → command:
000777      br -.2
```

The tape should move and the CPU loop.
(This is not the DEC bulk ROM for tape.)

4. Halt and restart the CPU at 0.

The tape should rewind.

The console should type "=".

5. Copy the magtape to disk by the following:

```
= (machine)
mcopy< (you) (< is CR or LF)
p for RP; k for RK< (machine)
p k (you) (or k as the case may be)
disk offset< (machine)
0< (you) (old move)
tape offset< (m) (moves more)
75< (y) (the tape show and execute UNIX from
count< (m) program at location 100000)
4000< (y) (the t
```

```
005040 005040
005040 005040
005040 010040
010040 012740
012740 000000
```

my UNIX puberty time

♦ 1981 CWI (MC)

- add RM03 (67 MB drive), tape drive, serial switch
- VAX 11/780 (32 bits)

frustrated about the DEC OS: UNIX V32 → 4.1 BSD

- started EUUG / EUnet / NLnet

♦ worked with University Berkeley, computer science group

Bill Joy (later SUN) (vi,VM), Kirk McKusick (csh,filesystem), Eric Allman (email,DB), Sam Leffler (tcp/ip), Mike Karels (DB), Keith Bostic, etc.

funded by DARPA: TCP/IP.

thank you Armando Stettner (DEC)

first: Andy Tanenbaum with Minix, only then: Linus Torvalds with Linux

- ◆ **1987 MINIX** as CS OS student training

it nearly escaped a disaster: system call problem

- ◆ **1991 Linux** as terminal server

it nearly escaped some disasters:

all was good, but a bad first tcp/ip implementation

Open Source changed the OS computer world

- ◆ *it is **free** but not a free beer*
- ◆ *everybody can contribute, so it **grows** ...*

beginning of 1990th

the focus was on

♦ the OS

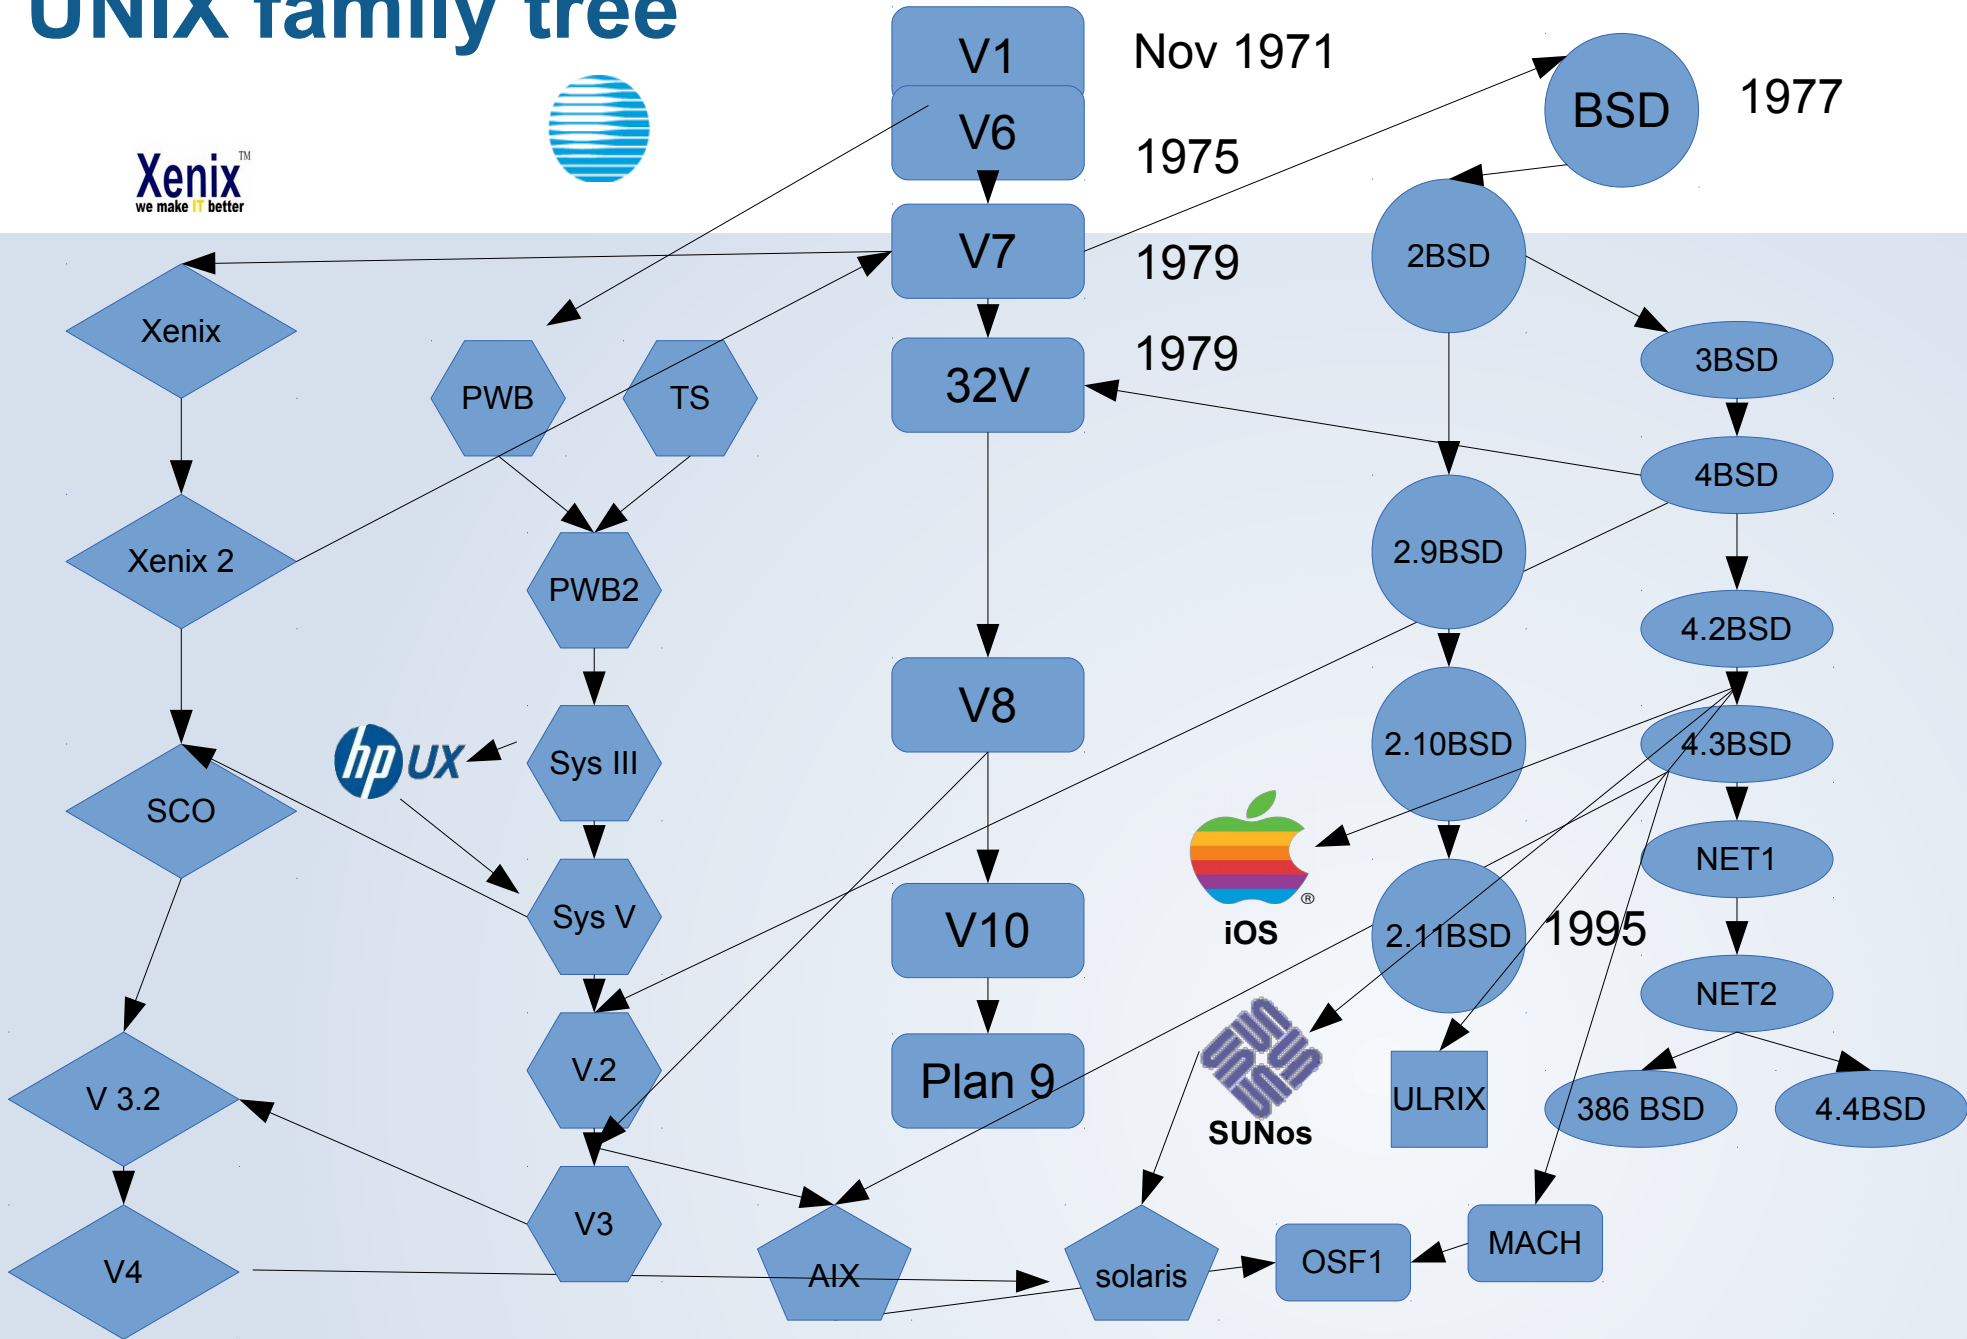

- boot, virtual mem management
- TCP/IP and network services
 - sendmail, bind, Ingres, X11 and graphics cards
- and basic OS services
 - shell (bash): first scripting language (troff, M4, ML/1)?
 - discovery that there was security problem

♦ text processing

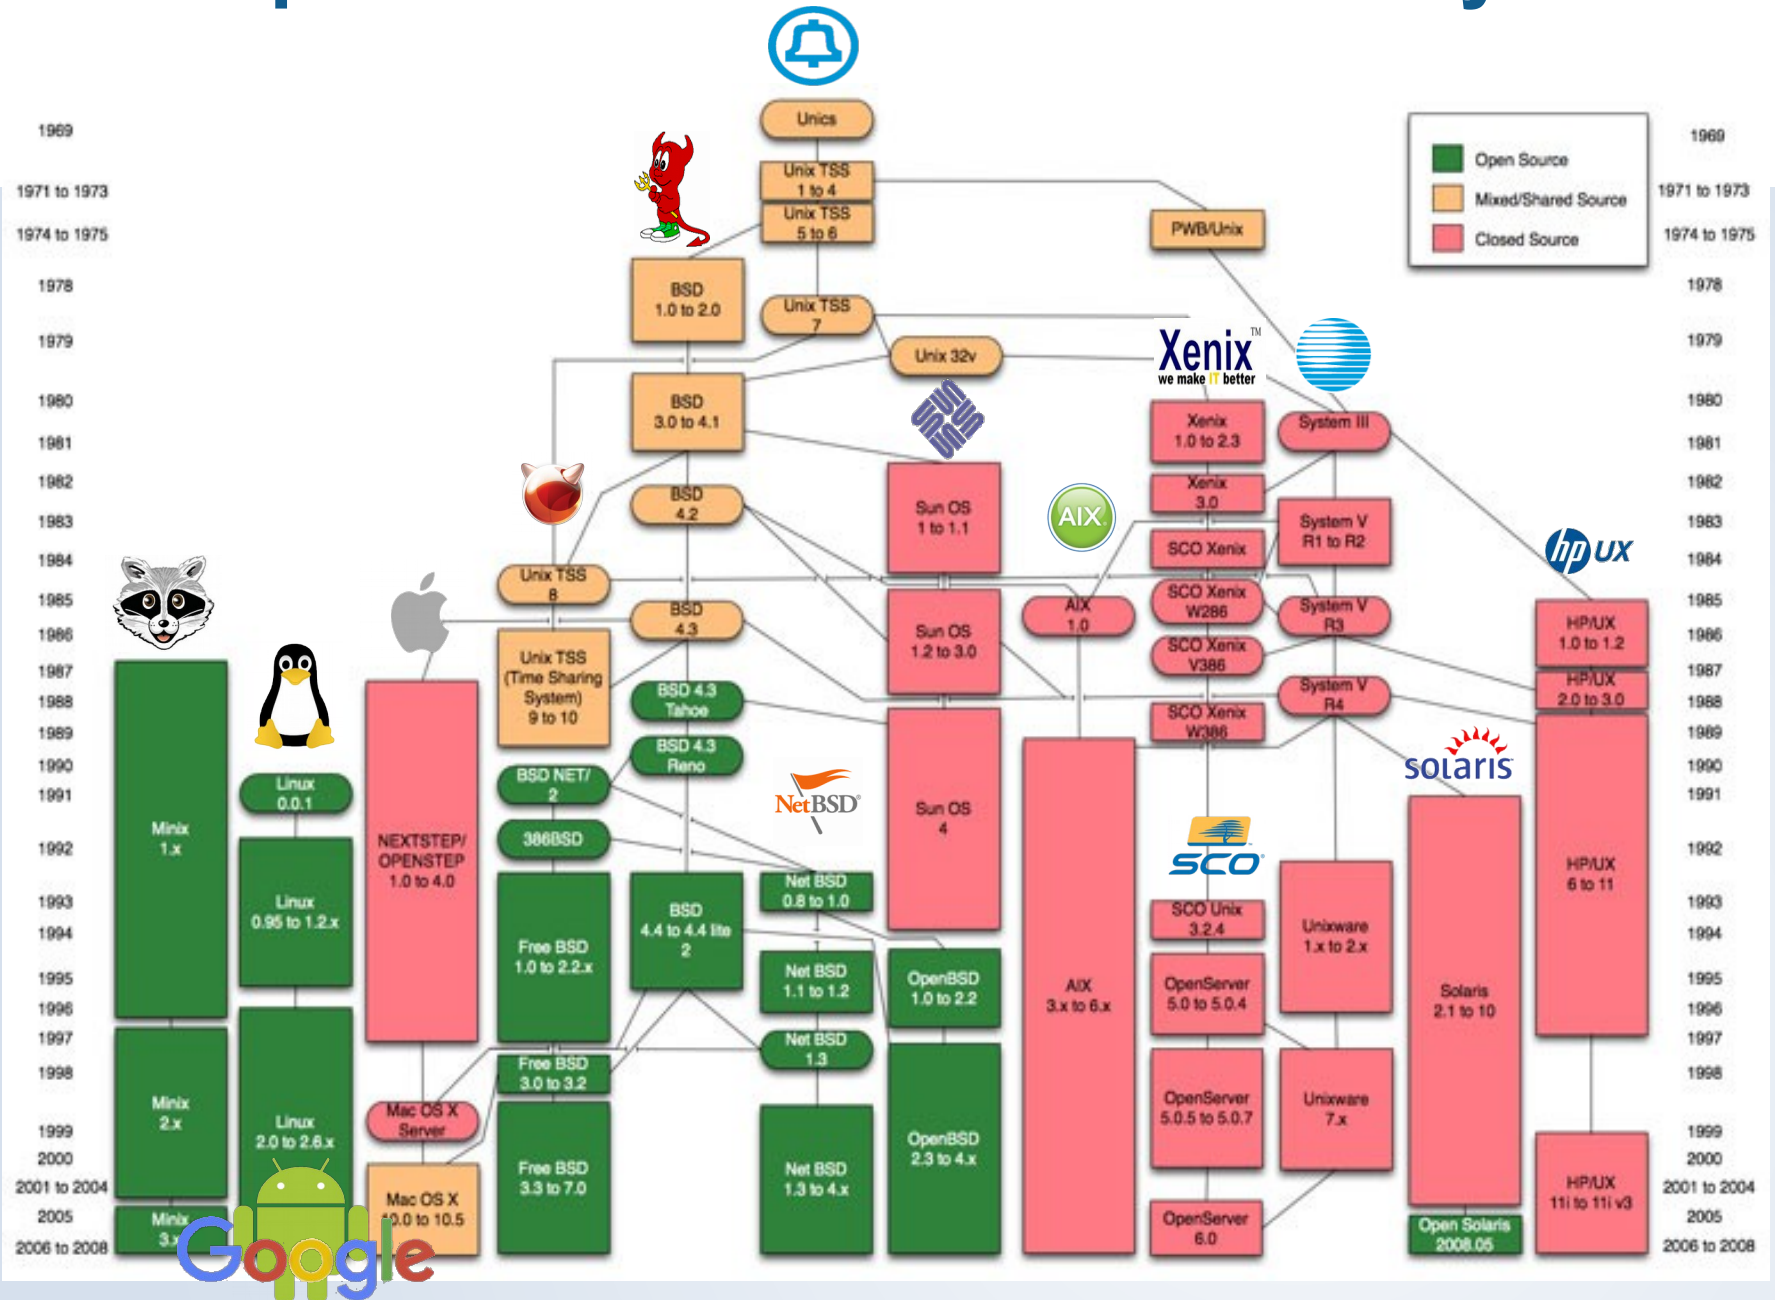

♦ C and the programming environment

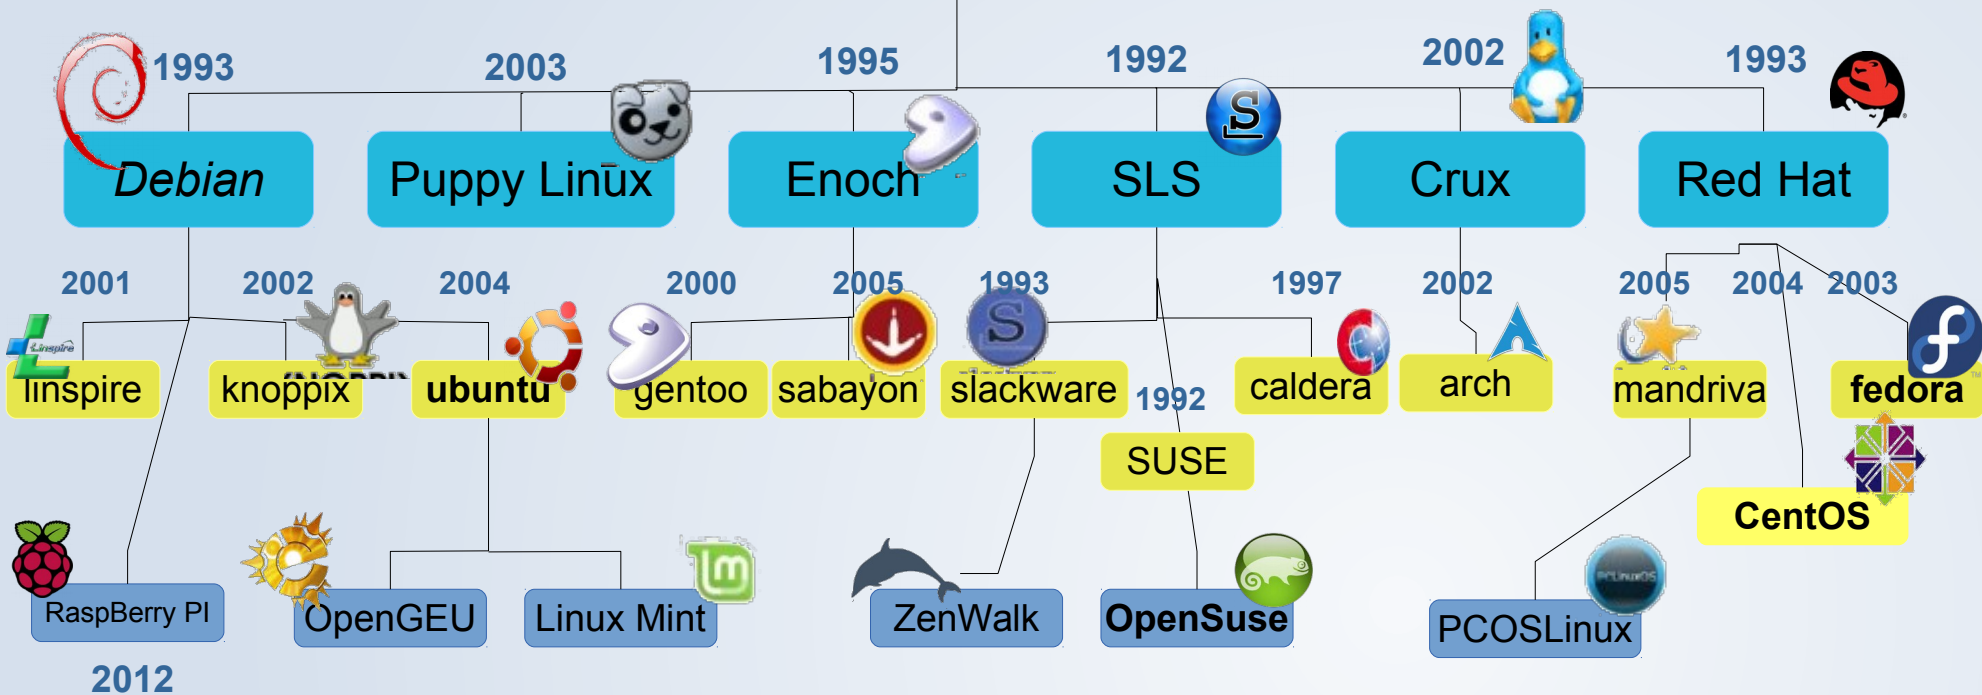

UNIX family tree

the complete UNIX/LINUX/MINIX family tree

LINUX family tree and many more

1984 birth time of the user:

focus on user interface X-Window

Marcus J. Ranum, Digital Equipment Corporation:

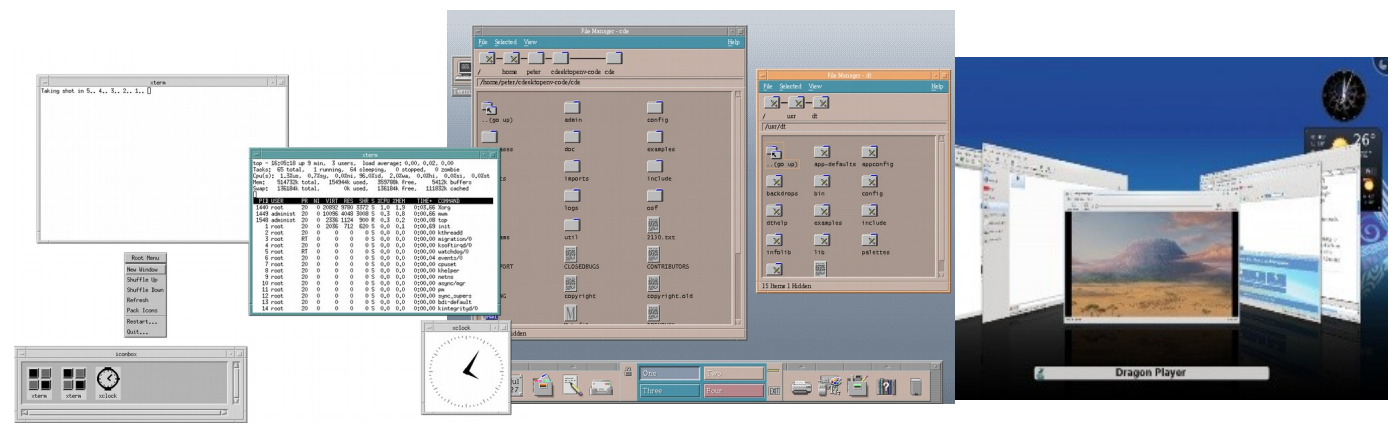

*“If the designers of X-Window built cars, there would be no fewer than five steering wheels hidden about the cockpit, none of which followed the same principles -- but you'd be able to shift gears with your car stereo -- **useful feature, that.**”*

Don Hopkins in *UNIX haters handbook*:
the X-Window disaster:

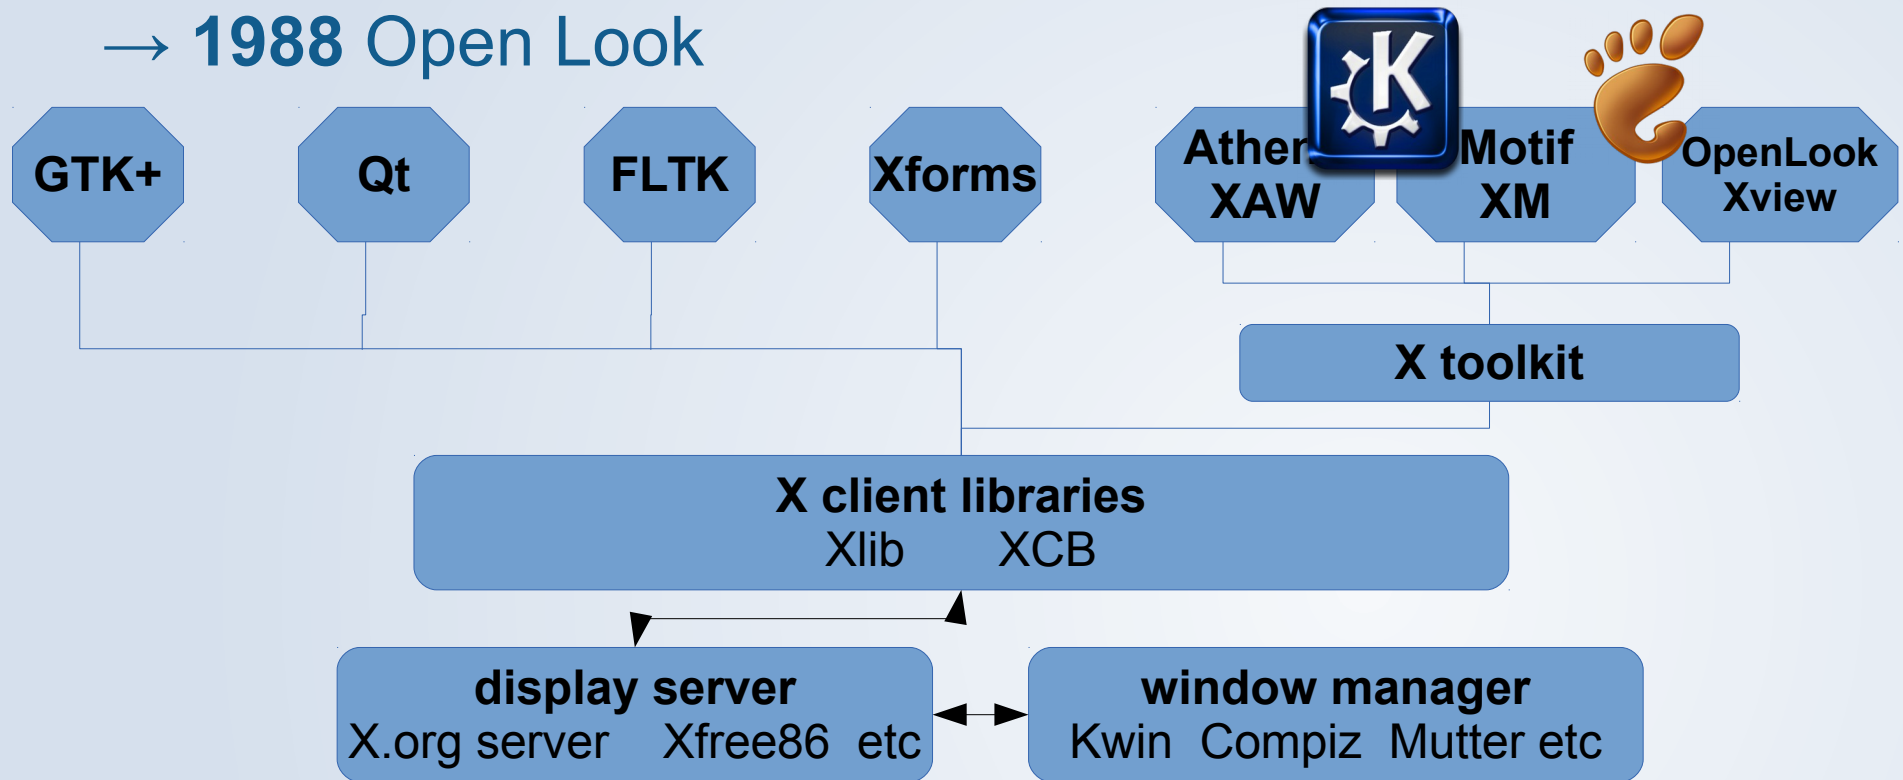

“How to make a 50-MIPS Workstation run like a 4.77 MHz IBM PC”

X-Window

- ◆ 1984: X1 1987: X11 2013: X11R7.8
- ◆ user interface first styling: SUN: NeWS (not open)

→ 1988 Open Look

UNIX services:

from easy (max 5 pages in C) in 1982
to full time job in 2016

- ♦ *network (IPv4 forever?):*
 - e-mail (sendmail, postfix, anti-spam, etc.)
 - domain/hostname service (bind, etc.)
 - telnet/ftp → website (Apache, SSL security)
 - RFS/NFS → cloud eg OwnCloud
- ♦ *IPv6 implemented, hardly used*
- ♦ *DNSsec implemented, hardly used*
- ♦ *X.509 certificates implemented, an organisational disaster*
- ♦ *encryption: lucky we are with Bruce, EFF and others*
- ♦ *forget your privacy*

SANE 2002

SANE 2004

1st International SANE Conference

SANE '98 - November 18-20, 1998

know your history

Peter Salus at SANE 1998 conference:

“Institutional Alzheimer's Disease

One of the biggest problems confronting us today is, in my opinion loss of memory.

Many contemporaries seem to have no recollection of even the recent past.

Thus, at the end of last July, The New York Times carried a story about a bug in MS's Outlook Email and Outlook 98 as well as Netscape Mail that were susceptible to breakins employing the ``*overflow buffer*.”

It is 10 years since Bob Morris loosed the Internet worm.

One would have hoped that **folks in Redmond**, WA, might know about that vulnerability.

Guess not.”

UNIX services: the How-To forget security, privacy

John Gage (SUN): “the network is your computer”

Ken Thompson: “everything is a file”

Dave Presotto/Robert Pike: Plan 9

UNIX services: from easy (5 pages in C) in 1982 to full time job in 2016

♦ *networking*

♦ *programming (today everything is scripted?):*

◦ assembler → fortran → B → C/pascal → C++/modula

◦ perl  exception handling: java  and python 

◦ bash, HTML, java-script, php

`#!/bin/bash`

♦ *debugging a script: it's a disaster*

♦ *objective programming: too complicated*

♦ *perl: ever debugged a regular expression?*

Douglas Adams: `^(?=(?!.)\1)([^\DO:105-93+30])(?-1)(?<!\d(?<=(?![5-90-3])\d))).
[^\WHY?]*$`

UNIX services: from easy (5 pages in C) in 1982 to full time job in 2016

- ♦ *networking*
- ♦ *programming*
- ♦ *databases: ingres → MySQL  SQLite *
- ♦ *the idea of “everything is a file” is lost?*
- ♦ *everything is in the MySQL database nowadays?*

UNIX a major role in encryption

- ♦ *governments “do not like” the UNIX public key mechanisms*

♦ 1991  PGP → 2001 GNU GPG

♦ 1995 NLUUG ondersteunt “het geval”

♦ 1998 **OpenSSL**

the focus nowadays is on *applications*

- ◆ *Open Source community thank you!*

- ◆ *the problem: tower of Babylon*

complexity

footprint N times OS footprint

interoperation is almost gone

- ◆ *the issue is not anymore:*

CPU/GPU speed 3GHz

memory 8GB

disc space 4TB

network bandwidth: fiber to the home, still IPv4

but wifi is still too slow, too local, insecure

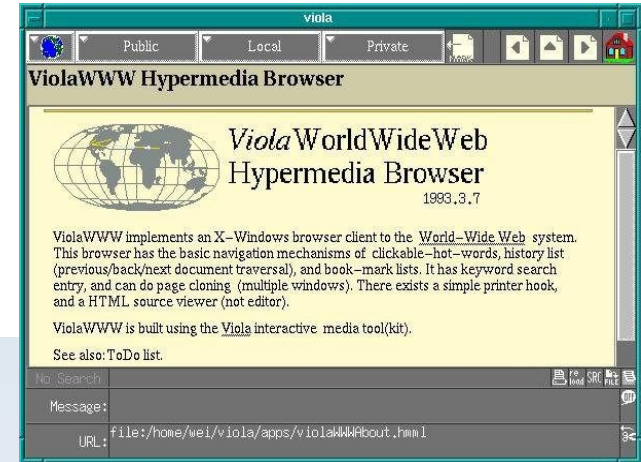

touching World Wide Web

◆ 1990 World Wide Web

CERN internet document access service

◆ browser applications

- **1992** birth on NeXtStep
- **1992** voila WWW
- **1993** Mosaic (NCSA)
- **1998** Netscape
- **1999/2002** Mozilla Firefox

browsers war

- ♦ the war is as it was with UNIX

commerce against freedom of use and contribution

against monopolies

against control

standards: theory ↔ pragmatism

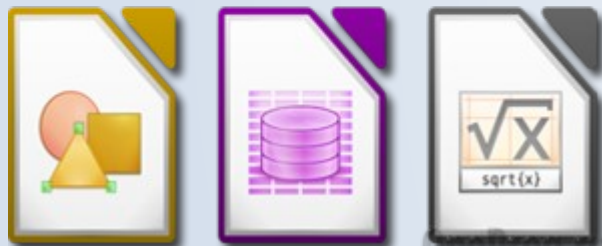

money gives you a saying

applications I use (only Open Source)

on: iOS, Ubuntu, Debian

- ◆ text processing
- ◆ interaction
- ◆ domotica
- ◆ environmental measurements

System is on magtape, perform the i
to obtain a disk pack.

1. Mount magtape on drive 0 at load point.
2. Mount formatted disk pack on drive 0.
3. Key in and execute at 100000

```
012700      mov (pc)+, rd
172526      curver: add #2, magtape
010040      mov v#0, -(rd)
012740      mov (pc)+, -(rd)
060003      → command:
000777      br .-2
```

The tape should move and the CPU loop.
(This is not the DEC bulk ROM for tape.)

4. Halt and restart the CPU at 0.
The tape should rewind.
The console should type "=".
5. Copy the magtape to disk by the following:

```
= (machine)
mcopy< (you) (< is CR or LF)
p for RP; k for RK< (machine)
p k (you) (or k as the case
disk offset< (machine)
0< (you)
tape offset< (m)
75< (y) (the tape sho
count< (m)
4000< (y) (the t
```

Installatie manual van UNIX van tape naar disk

PC - Peter Collinson

HJT - Hendrik Jan Thomassen

JC - Jan Christiaan van Winkel

my UNIX puberty time

- ♦ 1981 CWI (MC)
 - add RM03 (67 MB drive), tape drive, serial switch
 - VAX 11/780 (32 bits)
frustrated about the DEC OS: UNIX V32 → 4.1 BSD
 - started EUUG / EUnet / NLnet
- ♦ worked with University Berkeley, computer science group
 - Bill Joy (later SUN) (vi,VM), Kirk McKusick (csh,filesystem), Eric Allman (email,DB), Sam Leffler (tcp/ip), Mike Karels (DB), Keith Bostic, etc.
 - funded by DARPA: TCP/IP.
 - thank you Armando Stettner (DEC)

Interdata werd het bijna
VAX 11/780 serie nr 32

LAN: een dikke coax kabel TCP/IP gebaseerde LAN

Collision detect basis: vergelijkbaar met slotted ring (UK driven)

Nu weer Aloha?

Internet of Things met op Aloha gebaseerde technologie uit het Hawaii internet tijdperk?

Giving birth to European Unix Users Group and NLUUG

UNIX Conferences in Europe 1977-1990

- UK DECUS meetings, the UNIX groups pregnant time:
 - May 1977 Glasgow University
 - Sept 1977 University of Salford
 - Jan 1978 Heriot Watt University
 - Sept 1978 Essex University
- NL meetings, the UNIX user groups initiation:
 - Nov 1979 Free University Amsterdam
 - Apr 1981 CWI Amsterdam

Digital Equipment interest PDP11 groups serie DECUS

-

Initiatieven van een afscheidingsbeweging in de UK

Vanwege UNIX controverse met RSX11 en RT11

=

Meeting CWI was in weze het UNIX startschot
omdat Ken en Dennis er spraken.

MC machinery evolution

birth of MCvax.uucp

♦ PDP-11/45 → VAX 11/780

- from segmentation to paging
- unibus → massbus
- RM03: 67 MB, 55K US\$
- Kennedy tape 125ips, 800/1600, 45K US\$
- autodialer + 1200 baud modem: 2.5K US\$
- cheapest VAX11/750 340K US\$

CWI got snr 0032 with RSX11 (written in assembler)

first UNIX 32V AT&T, later BSD4.1 (thank you Armando, Bill)

♦ 1982 SUN 1 (Motorola 68020) BSD 4.2: MCsun

Armando Stettner (DEC westkust DEC UNIX fanaat)

En Bill Joy (paging programmatuur ipv UNIXV32 soort segmentatie)

SUN ook weer Bill Joy

-

Port naar Motorola 68020 en later RISK architectuur
en UNIX strijd met Intel CPU architectuur

=

SUN met argument graphics research

OK van koninklijke KMC

Kantoor en Machine Centrale in den Haag

two programs, many (>50) *NIX systems test Usenix/Uniforum conference Dec 1982

♦ Dec 1982:

CPU DEC, Motorola 680X0, Z8000, Intel 80X86 at **8-12 MHz**

- VAX 780: 6-8 secs (€ 340 K + airco)
- Apple Lisa: 22-25 secs (€ 10 K + fan)
- Intel Altos: 13-27 secs (+ fan)
- Amdahl: 0.5 secs (++ airco)

♦ 35 years later, Nov 2017:

- Intel Core i5, **3.30GHz**: 0.001-0.003 secs (€ 500)
- Rasp Pi Zero W, **1 GHz**, ARM V6 BCM2835:
0.01-0.02 secs (€ 10.- + SD card + USB adapter)

“Figures do'nt lie, but liars figure”

-

Test in reactie op computer beurzen in 1983

1.000.000 optellingen (register) short, int en long
door Andy Tanenbaum, Teus Hagen en later Rob Pike.

-

Met Rob: bc command: geen bc dan geen UNIX

De BC controversie: wetenschap en sales/gebruikers

=

We are no liars, so we just use shell scripts, perl and python

-

Zelfde programmaatje Python: 100 keer trager, echt waar

EUUG conferences

1981 April	CWI, Amsterdam, The Netherlands
1981 September	Nottingham University, UK
1982 September	University of Leeds, UK (Otis Wilson)

1991 September	EurOpen, Budapest, Hungary
...	

NLUUG.nl conferentie, 16^e of Nov 2017, Teus Hagen, "35 shades of gray"
38 slides minus 14 to go

Het vaarwel VAX/Interdata/Amdahl naar 80n86 Intel, Zilog en Motorola CPU's

-

Thema's: OS, linux, minix, scripting talen, netwerken, source control, workbench, programming, system admin, desktops, X-windows, graphics

-

ISPs problematiek: teveel **login accounts**

-

16 → 32 bit → 64 bits problematiek

Single processing CPU's

VAX had parallelisme en micro programming

maar nooit gebruikt

-

Swiss army knife (hint naar UNIX tooling): steeds maar dikker mes

voor key note: David Tilbrook en anderen

**first: Andy Tanenbaum with Minix,
only then: Linus Torvalds with Linux**

♦ **1987 MINIX** as CS OS student training

it nearly escaped a disaster: system call problem

♦ **1991 Linux** as terminal server

it nearly escaped some disasters:

all was good, but a bad first tcp/ip implementation

Open Source changed the OS computer world

♦ *it is **free** but not a free beer*

♦ *everybody can contribute, so it **grows** ...*

Andy: aanvankelijk geen UNIX, Amoeba

Echte CS prof: os voor studenten: pas na "stage" bij Labs Minix

=

Linus Trevolts: frustratie tav terminal acces problematiek

-

onduidelijk waarom hij geen Minix had genomen?

=

Doel de grootste, en het dijt maar uit

beginning of 1990th

the focus was on

♦ the OS

- boot, virtual mem management
- TCP/IP and network services
 - sendmail, bind, Ingres, X11 and graphics cards
- and basic OS services
 - shell (bash): first scripting language (troff, M4, ML/1)?
 - discovery that there was security problem

♦ text processing

♦ C and the programming environment

Probleem was:

OS en drivers

Talen: van Fortran naar C, tov Algol 60/68, Pascal, Modula

-

Tekst processing:

Artikelen zijn wetenschappelijker als ze gepubliceerd zijn niet met een kettingprinter maar getypeset

-

Andy boek OS principles geschreven dus via Bell Labs

Math. Centrum: wiskundige formules via typesetting

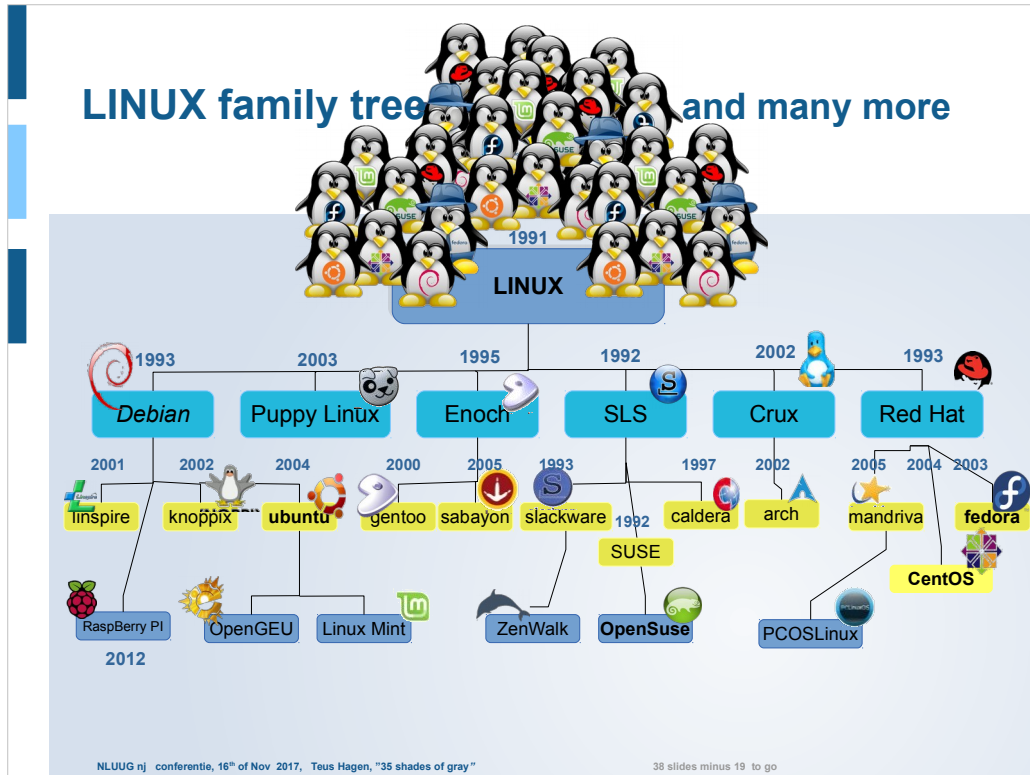

ipv IBM bolletjes typemachine

=

Kirk McKusick/Bill Joy, Eric, Keith, John, Michel ao

Richard Stallman

Linus Torvalds

- 1992 SLS - Peter MacDonald
- 1993 Red Hat - Marc Ewing (zoekt rode pet)
- 1993 **Debian** - Ian Murdock
-
- 2000 Enoch (Noach) - Daniel Robbins
- 2002 Crux - Per Lidén
- 2003 Puppy - Barry Kauler
-
- en het splitst maar af, ieder zijn eigen linux
- =
- De boom met eigen families

1984 birth time of the user:

focus on user interface X-Window

Marcus J. Ranum, Digital Equipment Corporation:

*"If the designers of X-Window built cars,
there would be no fewer than five steering wheels hidden
about the cockpit,
none of which followed the same principles
-- but you'd be able to shift gears with your car stereo --
useful feature, that."*

Don Hopkins in *UNIX haters handbook*:

the X-Window disaster:

"How to make a 50-MIPS Workstation run like a 4.77 MHz IBM PC"

Anecdotes:

Dennis Ritchie: 10 jaar Usenix, Portland, fireworks Oregon: student legt stickybuit uit aan Dennis

-

Ken Thompson bracht zo min mogelijk "lawaai" in UNIX

Ken vond zijn auto teveel signalen geven, het links/rechts signaal was al teveel..

Bij de auto van Dennis geroepen omdat er iets vreemds was: rode lampje brandde

-

Alles gromde en bromde naar behoren

-

Ken draaide het lampje er uit:

probleem opgelost

=

Minimaal 5 stuurwielen ergens verstopt

Geen stuurwiel is hetzelfde

Maar wel: radio knop om versnelling te sturen, aardige feature zo iets

=

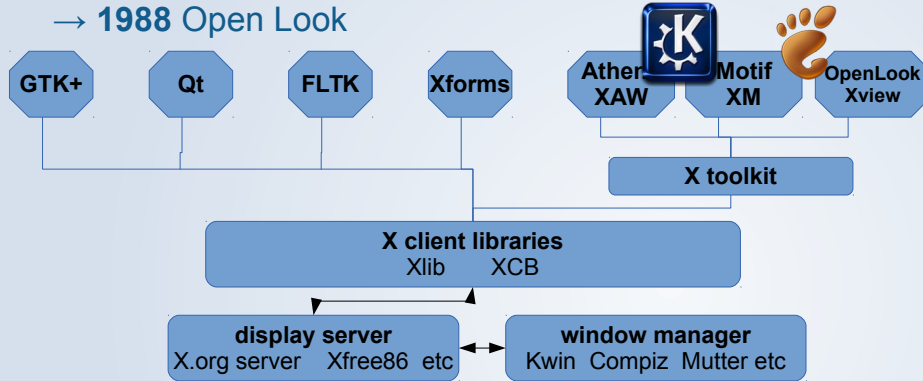

Hopkins: hoe breng ik een 50 MIPS werkstation op zijn knieën.

X-Window

- ♦ 1984: X1
- ♦ 1987: X11
- ♦ 2013: X11R7.8
- ♦ user interface first styling: SUN: NeWS (not open)

→ 1988 Open Look

X als tegenhanger van W (Windows)

Komt van MIT af

UNIX services:

from easy (max 5 pages in C) in 1982

to full time job in 2016

- ♦ *network (IPv4 forever?):*
 - e-mail (sendmail, postfix, anti-spam, etc.)
 - domain/hostname service (bind, etc.)
 - telnet/ftp → website (Apache, SSL security)
 - RFS/NFS → cloud eg OwnCloud
- ♦ *IPv6 implemented, hardly used*
- ♦ *DNSsec implemented, hardly used*
- ♦ *X.509 certificates implemented, an organisational disaster*
- ♦ *encryption: lucky we are with Bruce, EFF and others*
- ♦ *forget your privacy*

Ontwikkeling van services ipv algorithmen

SANE

SANE 2002 SANE 2004

1st International SANE Conference

SANE '98 - November 18-20, 1998

NLUUG.nl conferentie, 16th of Nov 2017, Teus Hagen, "35 shades of gray"

38 slides minus 23 to go

Geef het je te doen elke twee jaar weer een programma in elkaar zetten
Aspiraties naar wetenschappelijke erkenning van de proceedings

=

Peter Honeyman (honey van honydanbar uucp) van Usenix.

Altijd vooraan bij USENIX om naar wietland Amsterdam te vertrekken

=

PC: Walter Belgers (chair), Jos Alsters (tutotial coordinator),

Bastiaan Bakker, Fred Donck, Rudi van Drunen,

Peter Honeyman, Xander Jansen, Edwin Kremer,

Brenda Lagendijk, Tobias Oetiker, Alexios Zavras

know your history

Peter Salus at SANE 1998 conference:

“Institutional Alzheimer's Disease

One of the biggest problems confronting us today is, in my opinion loss of memory.
Many contemporaries seem to have no recollection of even the recent past.

Thus, at the end of last July, The New York Times carried a story about a bug in MS's Outlook Email and Outlook 98 as well as Netscape Mail that were susceptible to breakins employing the ``*overflow buffer*.”

It is 10 years since Bob Morris loosed the Internet worm.
One would have hoped that **folks in Redmond, WA**, might know about that vulnerability.
Guess not.”

De geschiedschrijver en roddelpers van alles wat met UNIX te maken heeft

De reviewer van alle gebeurtenissen

Scherp in zijn analyses

Was overal bij

-

Buffer overflow

Afzetten tegen Windows

-

Ted Lindgreen: windhoos

UNIX services: the How-To forget security, privacy

John Gage (SUN): “the network is your computer”

Ken Thompson: “everything is a file”

Dave Presotto/Robert Pike: Plan 9

UNIX services: from easy (5 pages in C) in 1982 to full time job in 2016

- ♦ *networking*
- ♦ *programming (today everything is scripted?):*
 - assembler → fortran → B → C/pascal → C++/modula
 - perl  exception handling: java  and python 
 - bash, HTML, java-script, php
- ♦ *debugging a script: it's a disaster*
- ♦ *objective programming: too complicated*
- ♦ *perl: ever debugged a regular expression?*
*Douglas Adams: `^(?=(?!.)\1)([^\DO:105-93+30])(?-1)(?<!\d(?<=(?![5-90-3])\d))).`
`[^\WHY?]*$`*

`#!/bin/bash`

UNIX services: from easy (5 pages in C) in 1982 to full time job in 2016

- ♦ *networking*
- ♦ *programming*
- ♦ *databases: ingres → MySQL*  *SQLite* 
- ♦ *the idea of “everything is a file” is lost?*
- ♦ *everything is in the MySQL database nowadays?*

UNIX a major role in encryption

- ♦ governments “do not like”
the UNIX public key mechanisms

- ♦ 1991  PGP → 2001 GNU GPG
- ♦ 1995 NLUUG ondersteunt “het geval”
- ♦ 1998 **OpenSSL**

NLUUG doneerde een flinke som geld aan Phil Zimmerman

Verwikkeld in rechtszaken in 1995

-

Encryptie algoritme was een wapen, dus geen export vergunning US

-

Smokkel via boek en OCR boek

-

T-shirt gedragen bij passeren douane

UNIX services: from easy (5 pages in C) in 1982 today 2016 it is a full time job

- ♦ *networking*
- ♦ *programming*
- ♦ *databases*
- ♦ *workbenches:*

- document workbench:

roff → new roff → typeset roff (CAT) → GNU roff → PS

- programming workbench:

1972 SCCS (make) → RCS → CVS → GIT

THIS ALL IS NOW IN THE PAST

the focus nowadays is on *applications*

- ♦ *Open Source community thank you!*
- ♦ *the problem: tower of Babylon*
 - complexity*
 - footprint N times OS footprint*
 - interoperation is almost gone*
- ♦ *the issue is not anymore:*
 - CPU/GPU speed 3GHz*
 - memory 8GB*
 - disc space 4TB*
 - network bandwidth: fiber to the home, still IPv4*
 - but wifi is still too slow, too local, insecure*

touching World Wide Web

◆ 1990 World Wide Web

CERN internet document access service

◆ browser applications

- 1992 birth on NeXtStep
- 1992 voila WWW
- 1993 Mosaic (NCSA)
- 1998 Netscape
- 1999/2002 Mozilla Firefox

browsers war

♦ the war is as it was with UNIX

commerce against freedom of use and contribution

against monopolies

against control

standards: theory ↔ pragmatism

money gives you a saying

applications I use (only Open Source)

on: iOS, Ubuntu, Debian

- ♦ text processing
- ♦ interaction
- ♦ domotica
- ♦ environmental measurements

the UNIX time line

- 1969 Bell giving birth to UNIX

Transmediair – administratieve hulp, ondersteuning

-

At Computing: conf. tasjes, terminal ruimte (wat was dat?)

-

Medison Guhrka: black hat sessies, vele sprekers gesponsord

-

Schuberg Philis: 25 jaar NLUUG ondersteuning

-

Snow: nu nog steeds ondersteuning, borrel, broodjes

NLUUG sponsors past up to (s)now

NLUUG.nl conferentie, 16^e of Nov 2017, Teus Hagen, "35 shades of gray"

38 slides minus 45 to go

Sommige bedrijven bestaan niet meer

Sommige zijn intussen overgenomen

Sommige hebben hun naam veranderd:

Bijv Gurkha naar Secure

Sommige logo's zijn niet duidelijk of niet te vinden

-

Wel bedrijven die de borrel en/of lunch mogelijk maakten

Of de conf. gadgets van een handvat voorzagen

-

Schuberg betaalde in weze 25-jaar NLUUG viering

what is keeping me busy?

- ♦ internet security and privacy
- ♦ local environment:
gasses, noise and particulate matters
environmental measurements (MySense)
- ♦ digitizing local society:
local websites,
email lists, OwnCloud

=

Internet privacy en security

=

Digitale ondersteuning plaatselijk

=

Luchtkwaliteit ivm bio-industrie Limburg

my thanks goes to, just to name a very few
